WATEROUS

CAPTIVATER-LOCKING NOZZLE CAP

Product Code(s): FM00131 | Hydrants | Waterous

The Captivater - Locking Nozzle Cap

The Captivater helps prevent unauthorized hydrant use, reduces water theft, reduces hydrant vandalism, and lowers operation costs. Its universal design fits EVERY hydrant from EVERY manufacturer, regardless of year or model.

Features

Fits any make, model or year of hydrant in minutes without modification. Provides a safe and easy method to secure fire hydrants. Easily installed in minutes without special tools. Sealed to help protect from the elements.

Withstands weather and long-term use as well as or better than original caps. Removed only with a Captivater wrench – each wrench has a serial number, allowing access to be controlled. Looks like a standard hydrant when installed.

This means your hydrants are secured from unauthorized use, so children and vandals cannot gain access to your water system.
